Thanks Denise for the access agreements. FYI, I talked to the field team this morning and they now expect to complete the soil and groundwater screening with the field GC tomorrow, if we continue to make the kind of progress we have the past few days. We would start the soil delineation sampling on Monday (5/13). We are trying to complete that effort during that week and would then start the overburden monitoring well installation the week of May 20. I will have a proposed MW location figure put together to send to you for approval.

Do you think you will be adding in new work for the field GC? If not, we will ship it back to the vendor next week.

Thanks
Susan

Frances,

I just left you a voice message to call me back but here is what I wanted to talk about
Lifescan

I noticed that all of the proposed SVG samples at Lifescan are located on the west side of the building. I want to relocate one of the 10 samples to the eastern portion of the building (the side that is adjacent to Walgreens). I want to see if there is VOC contamination on Lifescan that may affect the neighboring property (Walgreens) closer to the SVG samples –collected by ERT- showing concentrations at 50,000 ppbv of one of the COC.

Walgreens

We are on top of this one...

Raul Lugo

I spoke with Mr. Lugo on Thursday evening. He says that the drums on his property are related to the construction contractor renting his property. He gave me a contact # for his tenant Ricardo Acosta 787-528-8025. Mr. Lugo thinks that his tenant is a subcontractor for PRASA and PRDOT they install cement pipes for those governmental agencies. I'm going to call Mr. Acosta and get back to you. I asked Mr. Lugo to sign the agreement. Please call him to make arrangements to sign the consent for access form. Ask him for his postal address and other contact phone #s.

Jose Mahia – Propper will returned signed access by Wednesday.

Attached access signed by Lydia Matos and Carmen Montalvo (parking adjacent to Cabo Rojo Prof. Dry Cleaners)

I'm following up on all other pending access.

Talk to you soon.
